

Agility.

That's what you want from your Oracle consulting services provider.

USIT applies best-of-breed Oracle technologies to rapidly deliver cost-effective solutions that achieve results for our clients — without a lot of red tape and bureaucracy.

We use a combination of industry best practices and USIT program methodologies to rapidly deploy Oracle technology solutions that are cost-effective, low-risk, and meet or exceed requirements. USIT program methodologies are based on best practices that align with Government and Commercial IT management and development lifecycle standards.

Our consultants have distinguished careers serving Federal, Civilian, State & Local, and Commercial clients and maintain some of the industry's top credentials, including Oracle Master Certifications, security clearances, and advanced degrees. They have proven experience on hundreds of Oracle application development and sustainment programs.

We can help you maximize your Oracle investments by improving service levels, simplifying operations, and optimizing performance.

“USIT has an excellent technical and program management approach, which enables them to successfully accomplish the specific tasks / requirements identified within the PWS.”

— USIT Defense Logistics Agency Client

Applications & Enterprise Management

USIT offers full lifecycle implementation services for Oracle’s entire application portfolio, including PeopleSoft, Siebel, and Oracle E-Business Suite. Our advanced integration services will enable you to leverage Oracle’s Application Integration Architecture to fully realize the value of your application investments.

Intelligence Programs

Our Intelligence Practice consultants have distinguished careers in the Information Technology industry, with significant experience in the Intelligence community (DoD, FBI, CIA, and NSA). They have demonstrated capability to provide you with systems specifications, technology evaluations, architectural solutions, development of technical systems requirements, and program-level white papers. USIT’s Intelligence Practice responds rapidly with technical analyses, consultation, planning, and assessments in time-critical situations. USIT delivers unique talent, agility, and value.

USIT has developed a *Cross-Domain Information Security (CDIS)* framework that is innovative and cost-effective in combating cyber threats. USIT CDIS is the ideal solution to secure information in a multi-domain environment. CDIS provides an optimal multi-classification, multi-domain security solution that guards against data spillage and ensures the secure delivery of sensitive information.

Healthcare Programs

Whatever your need, our Oracle healthcare experts can provide the right approach to comply with regulatory requirements (e.g., HIPAA Privacy Act) while reducing administrative costs, automating records, and optimizing storage. Our healthcare experts focus exclusively on Oracle technologies and are ready to lead Oracle software implementation, integration, and sustainment projects of any size. We consistently deliver solutions that achieve our clients objectives. Our deployment efforts for Military Healthcare Systems (MHS) received the Commander’s Commendation for outstanding performance.

With an extensive focus on Oracle technology implementations, USIT has built a service delivery framework on best practices (e.g., PMI, SDLC, and others) and has used Oracle implementation methodologies to develop Oracle-specific program, project, and application development frameworks.

We rapidly deploy Oracle solutions that achieve results.
