

Agility.

That's what you want from your Oracle consulting services provider.

USIT applies best-of-breed Oracle technologies to rapidly deliver cost-effective solutions that achieve results for our clients — without a lot of red tape and bureaucracy.

We use a combination of industry best practices and USIT program methodologies to rapidly deploy Oracle technology solutions that are cost-effective, low-risk, and meet or exceed requirements. USIT program methodologies are based on best practices that align with Government and Commercial IT management and development lifecycle standards.

Our consultants have distinguished careers serving Federal, Civilian, State & Local, and Commercial clients and maintain some of the industry's top credentials, including Oracle Master Certifications, security clearances, and advanced degrees. They have proven experience on hundreds of Oracle application development and sustainment programs.

We can help you maximize your Oracle investments by improving service levels, simplifying operations, and optimizing performance.

“USIT has an excellent technical and program management approach, which enables them to successfully accomplish the specific tasks / requirements identified within the PWS.”

— Defense Logistics Agency

Rapidly Deployed Applications & Enterprise Management Solutions

USIT offers comprehensive, lifecycle implementation services for Oracle’s entire application portfolio, including Oracle EBusiness Suite (EBS), PeopleSoft, and Siebel. Our advanced integration services will enable our clients to leverage Oracle’s Application Integration Architecture to fully realize the value of their application investments. And our ability to apply best practice Oracle and project management methodologies enables us to cost-effectively and rapidly deploy solutions.

For **Military Sealift Command (MSC)**, USIT provides system maintenance, tier 3, and system enhancement support for their EBusiness Suite (EBS) MSC Financial Management, Human Resources, and Enterprise Data Warehouse portfolios. USIT’s disciplined application of our best practices enabled us to successfully transition from the previous systems integrator to USIT in half the time required by MSC, perform their R12 upgrade, and successfully sustain MSCs complex mission critical business system.

Mission Critical Support of Intelligence & Security Programs

USIT provides architectural and design services to the **Department of Homeland Security (DHS)** Immigration & Customs Enforcement (ICE) for the Enforcement Alien Booking Module (EABM). Using cutting edge Oracle technologies, USIT’s expert Oracle developers have reduced network traffic by 33%, increased application speed by 200%, and avoided a costly and major upgrade to the satellite system through the replacement of outdated intranet data transfer techniques.

USIT uses an Oracle forms application hosted on Oracle Application Server 10GR2 and is delivered to the end user as a JNLP-launched applet. USIT has received numerous notes of “job well done” from the HP Project Director for USIT’s work on the project, notably for USIT’s use of new technologies to speed up the application and for meeting aggressive demands and deadlines.

Exceptional Department of Defense (DoD) Experience

USIT serves many DoD clients, including the **Defense Logistics Agency (DLA)**. USIT’s team of Oracle database and application server experts provide technical services in the areas of installation, configuration, patching, and upgrading Oracle databases and application servers. Support of mission critical operations is a priority to USIT: We have produced a number of achievements to gain efficiencies, reduce costs, and improve overall service. We have reduced open trouble tickets from 40 tickets per week to 9 in less than 10 months.

Our technology improvements, such as introducing Oracle Enterprise Manager, have improved performance, increased response time, and improved system availability. Implementation of technologies such as Solaris Zones have enabled server virtualization, which allows for more efficient use of server resources and the flexibility to react quickly to changing business requirements. And we have formalized the patch update process by consolidating asset inventories, virtualizing servers, and implementing a rolling software update process. We have reduced the time required to perform patch updates while minimizing disruption to operations.

Award-winning Healthcare Services

USIT supported the **Military Health Systems (MHS)** rollout of the Defense Medical Human Resources System intranet (DMHRSi). USIT provided exceptionally qualified training managers who specialized in Oracle HRMS 11i suite of software products. Additionally, we provided software configuration recommendations, re-hosting, and migration plans for 104 computer hub sites supporting 660 Medical Treatment facilities. We performed installation of new blade systems at all sites, installed and tested applications-related software including custom applications (client/server and web based), Oracle 10g database, Oracle AS 10g, 3M HDM, and Oracle 11i eBusiness Suite, and provided security support (DITSCAP). USIT received Commander’s Commendations for outstanding performance at Fort Leavenworth and Fort Bliss.

We rapidly deploy Oracle solutions that achieve results.
