

Oracle Forms Upgrade

Oracle Forms Upgrade

Breathe new life into older Oracle Forms applications. Let USIT's Oracle Forms experts upgrade your applications to the latest version of Oracle Forms. Here's why:

Oracle Forms, a component of Oracle Fusion Middleware, is Oracle's long-established technology to design and build enterprise applications quickly and efficiently. Oracle remains committed to the development of this technology, and to the ongoing release as a component of the Oracle platform. This continuing commitment to Forms technology enables you to leverage your existing investment, by easily upgrading and integrating existing Oracle Forms applications to take advantage of web technologies and service oriented architectures (SOA).

Why upgrade to the latest release of Oracle Forms?

- Upgrading and redeploying your older client-server version enables a centralized, web-based environment for easier updates and maintenance.
- Changes to application look-and-feel are minimal – no need to re-train end users.
- Leverage your existing investment – the latest Oracle Forms version enables seamless integration and interoperability with other (J2EE) applications.
- By upgrading your Oracle Forms version only, you minimize the re-certification and regression testing required with a full application upgrade.

Single Application Server

Following an upgrade, you can make use of the Oracle application server as the platform to integrate your Forms and J2EE based applications to share business logic. This enables you to:

- Keep your existing back office applications running on Oracle Forms, and avoid re-training and rewriting existing applications.
- Enable the use of hand-held devices.
- Integrate to 3rd party applications via web-services, regardless of implementation.
- Provide external customer access to your applications through a simple "self service" web-interface.

According to Oracle

– Oracle customers have a considerable level of investment in applications developed using the Oracle Forms, Reports and Designer products and, frequently ask questions about Oracle's strategy and commitment to these products. Oracle has no plan to desupport these products. Furthermore, new versions of Oracle Forms and Oracle Reports will continue to be released as part of Oracle Fusion Middleware.

July 2009 – Oracle Corporation

Why US Information Technologies?

We are an Oracle partner with a team of Oracle certified professionals, who are mostly former Oracle employees themselves. We are focused exclusively on Oracle Technologies, with years of experience in Oracle software implementations. We know Oracle best and can provide your business with comprehensive Oracle service at a reasonable price.

At **USIT**, we are sure that once we perform your upgrade, we will become your trusted advisor for all things Oracle. **Why pay top dollar to keep specialty Oracle expertise in house?** Consider us for on-demand Oracle services. We can complement your staff for difficult Oracle projects, help you maximize your investment in Oracle technology, and take advantage of new database features, and the benefits of Grid computing. After the upgrade, we can help you with applications and database performance monitoring and tuning, performance analysis, and patching as necessary, all for less than the cost to keep specialty Oracle resources on your staff.

USIT has the in-house expertise to insure a trouble-free upgrade while minimizing or eliminating downtime normally associated with an upgrade. USIT can perform your Forms Upgrade independently, or we can work with your developers to ensure a smooth and efficient transition to your upgraded environment.

Upgrade your older Oracle Forms applications and at the same time, move to an environment that is fully supported by Oracle.

Make the right decision; if your application satisfies the requirements of your end-users, consider the relatively low cost upgrade of Oracle Forms and Reports. Avoid re-writing the application and the cost of re-training users.
